| $1910-41$, AND BY STATES, 1941 |

GROSS AND CASH FARM INCOME, UNITED STATES, 1910-41

Sharp advances in the prices of most farm products, with some inCREASE IN P PODUCTION, RAISED GROSS INCOME IN $194 \mid$ TO THE HIGHEST LEVEL reached since 1920. Higher prices increased moderately the value of FOOD, RENT, AND FUEL WHICH THE FARM PROVIDES. FOR FAMILY LIVING. GOVernment payments were reduced, but the sharp advances in prices of products resulted in a marked increase in cash income.

## Summary

Cash incone from farm markstings in May, toteling 988 million dollars, was only slightly higher than the revised estimate of 982 million dollars for April but 32 percent more than in May last year. Despite a rise of 2 points in prices received by fermers from mid-April to mid-Nay, income from farm marketings increased less than usual. Marketings of cattle declined from April to May instead of meking the usual seasonal increase and marketings of poultry and dairy products increased somewhat less then usual, resulting in a decline of about 7 percent in the seasonally adjusted income from livestock and livestock products. Income from crops declined seasonally from April to May. Income from fruits, particulerly from strewherries and from citrus fruits, was up sharply in May, but the lateness of the season retarded the seasonal increase in income from truck crops. Receipts from grains declined more then usual

Government payments for Narch and April amounted to 162 million dollars and in May totaled 37 million dollars. For the first 5 months of 1942 Government payments totaled 389 million dollars compared with 303 million dollars from January to Nay last year. Cash farm income including Government payments from January to Nay this year totaled 5,098 million dollars compared with 3,542 million dollars last year.

During the first 5 months of 1942 cash income from farm marketings totaled 4,709 million dollers compared with 3,239 million dollars in the first 5 months of 1941. Income from crops was up 39 percent while income from live* stock and livestock products recorded a 48-percent increase from January to May 1942 over the corresponding period of 1941. Returns from nearly all commodities during this period have been somewhat higher than a year earlier, but the greatest increases in income have been from soybeans, potatoes, rice, hogs, cattle; and eggs, and milk sold at wholesale.

Because of the smaller than usual increase in farm sales from April to May, the seasonally adjusted index of cash income from farm marketings declined from 136.0 percent of the 1924-29 average in April to 129.5 percent in May. Most of the decline was in the income from meat animals, and the index of farm income from this source decinned from 171.0 to 155.5. Income from poultry and eggs also increased less than usual, and the seasonally adjusted index declined from 147.0 percent in April to 133.0 percent in May. The decline of 1 point in the seasonally adjusted index of income from orops resulted largely from the later movement of truck crops, particularly cantaloups and watermelons.

Conditions are favorable for larger than average crop production in 1942, and the marketings of livestock and livestock products are expected to continue to exceed previous records. These large marketings, together with some further improvement, in demand, should result in at least the usual seasonal increase in income from May to october. The trend of farm income during the next few months, however, will be influenced by the shortage of storage space for grains, which may retard their movement to market. The increase in income from May to June is likely to be smaller then usual because of the lateness of wheat harvestings and the fact that a large proportion of the crop is being held back to be placed under Government loan. The recent decline in cotton prices has also retarded the redemption of loan cotton . On the other hand, income from truck crops probably will increase more than usual from Nay to June.
-- June 22, 1942
April Income from Farm Marketings Continued
Above a Year Earlier in All States
Cash income from farm marketings in April continued sharply higher then a year earlier in all 48 States, the increases in income amounting to 22 percent or more. Income from crops was higher in all States except

Maryland, where no tobacoo was sold in April tinis year. Income from livestock was higher than a year earlier in all States except South Carolina. In this State income from livestock was larger than usual in April 1941 becausa of the lerge seles of hogs.

The change in incorne from farm marketings from March to April in the South Atlantic and Western regions was of about the usual seasonal proportions, but in the other regions income increased instead of making the usual seasonal decline. In the East and Viest North Central regions income was up somewhat from March to April because of the marked increase in sales of eggs and meat animals, particularly hogs, and in the South Central region income increased somewhat more than usual because of the added income from redeemed cotton during April.

Cash income from farm marketings for the first 4 months of 1942 was sharply higher than a year earlier, the increases in the different states ranging upward from 26 percent. In the North Atlantic region the increase of 35 percent was smaller then elsewhere where increases ranged from 48 to 57 percent.

North Atlantic States
Cash income from farm marketings in the North Atlantic region in April totaled 31 percent more then a year earlier, with returns from crops and from livestock and livestock products recording about the same percentage increases. Income in Maine increased most and in April was 63 percent higher than year earlier, whereas in the remaining States the increases ranged from 25 to 41 percent. From January to April income in the region totaled 35 percent more than last year, with the increase in Maine amounting to 78 percent and in the remaining States from 26 to 37 percent.

East North Central States
Returns from both crops and livestook and livestock products in this region during April were about 45 percent higher than a year earlier. The increases were fairly evenly distributed between the different States. The increase of 31 percent in Michigen was less than in the other States where increases ranged from 43 to 53 percent. During the first 4 months of 1942 returns from crops were sharply higher than last year and recorded a greater percentage increase then returns from livestock. Returns from dry edible beans, corn and soybeans were much larger, with a greater increase in income in Illinois than in the other States. For the region as a whole, total income from farm marketings was 51 percent higher than in the first 4 months of 1941. In Michigan the increase was 39 percent, while in the remaining states the increases ranged from 46 to 57 percent.

West North Central States
In most of the West North Central States increases over a year ago in income from livestock were much greater then increases in the income from crops. In North Dakota and Kansas returns from wheat were somewhat larger than a year earlier, and crop income was also up sharply. Total

CASH INCOME FROM FARM MARKETINGS, BY REGIONS, AVERAGE 1936-4O. AND 1941-42

income from farm marketjnga in this region during April was 52 percent higher then a ygar eas li.er. 'The increases in income ranged from 43 percent in lowa to 64 percent in Nebraska.

From January to fapril inorcases in income over last year were less for crops than for livestock. Returns from ages wore nore than twice those in the first 4 morthe of $194 i$, returns fron hogs wore almost twice as great, and the income from cattle and milk sold at wholesale also was up sharply. In Snuth Jakota, where income from crops wes slightly reduced, the increase in income for the first 4 months of the year amounted to 36 percent, but in the remaining S'cates the increases ranged from 63 percent in Iowa to 57 percent in Missouri.

South Atlantic States
Income in all States during April was sharpiy higher than a yoar oarlier. However, since broilers are not included in the monthly estimates of income prior to $1 \Omega 42$, the estimates of 1942 income are not comperuble with those of eariier years in the Morthern States of this region where broilers provide a large part of the total income.

For the region as a whols income from January to hpril was about 50 percent higher then last yoar. In Scuth Ceroline and Gonrgie the increases were slightly smaller then in the other states because of the relatively small income from cotton. In April, however, returns from orops in these two States vere sharply higher than a year earlier. With favorable crop prospocts, income in this ragion should continue to exceed that of the corresponding months of 1941 when income was sherply curtailed because of the drought.

South Contral Statos
Income from crops in the south Central region during April was sharply higher than a year earlier. Returns from cottor, potatoes, and wheat were more then twice those last yearg and income from feed crops and truck crops also was much higher, Income from livestock in this area $r$ ecorded the largest gain of any major geographic region, and total income from farm marketings wes 69 percent more than a yeer earlier. Income was up sharply in all States, the incresses rarging from 52 percent in Kentucky to more than 100 percent in Arkensas.

Returns from both crops and livestock during the first 4 months of 1942 were sharply higher then a year earlier in all States. The increases in total income from farm markotings ranged from 39 percent in Kontucky to more than 80 percent in Arkansas.

## Western States

Increases in income in the Western region during April ranged from 26 percent in Wyoming to more than 60 percent in Idaho. Returns from both crops and livestock goined 40 peroent for the region. From January to April returns from both orops and livestock were up more then 50 percent and total income from farm marketings exceeded the first 4 months of 1941 by 51 percent. In Montana the increase in returns both from crops and
from livestock was somowhat less than for the region as a whole, and total income from farm marketings wes up only 28 pareent. In the remaining states the increases in incons ranged from 36 percent in New Mexico to 72 percent in Idaho.

1941 Gross Farm Income
The preliminary estimntes of cash farm income for 1941 have been revised to incorporate more complete data on sales of livestock ond livestock products, and estinates have been made of the value of farm products reteined on farms for horne consumption. The revised estimate of cash income from ferm marketings in 1941 of 11,244 million dollors is slightly. higher than that published in February largely because of the inclusion for the first time of income from comeroial broilers. Estimates of cash income fron Livastook and livestock products also heve been revised back to 1934 to allow for revisions in the estimates of production and disposition of livestock and livestock products, as well as to include the incoma from commercial broilers.

The value of products retained on farms for home consumption in 1941 was estimated a.t 1.421 million dollars. This value, together with the cash income from farm merketings, Government payments, and the rental value of farm dwellings resulted in a total gross farm income of $13,957 \mathrm{million}$ dollars for 1941. This compores with 11, 043 million dollars in 1940, and is the highest for any year since 1920 when gross income was estinated at 15,908 million dollers. Estimates of the different componerts of gross farm income from 1910 to date are given in teble 5 of this report.

The estimates of cash and gross farm income from crops and from livestock and iivestock products for 1941 are given, by states, in table 6. The esinates of cash income from crops in this table are the same as those previnusly published, The estimates of income from livestock and livestock products have been revised, and the volue of products retained for home consumption is given for the first time. I/

Cash farm income end Government perments in 1941, plus the value of products consumed on ferms where grow, were higher than the preceding yeer in all states except, Scuch Carolina, and in that State the decline amounted to less then 1 percent, The largest increases in income, plus home consumption, were in Mississippi, Arkansas, North Dakota, and Kamsas. In all of these frates crop production was up sherply from the precoding year and prices totaled somewhat higher then a year earlier. The smallest inereases in income were in South Carolina and Georgia and neignboring States where the sering and early summer drought greatly reduced the output of crops, and in the North Atlantic rogion where pirices of ferm products advenced less than in other areas. The increase in income from livestock and livestock products in 1941 emounted to 31 percent, whereas the increase in crops was 33 percent. The increase in income from livestock was more evenly distributed among the different states ond income from this source was sherply highor in all States.

17 Estimates of cash and gross income, by States, for the period 1935-41 and, by commodities, for the same years wore recently released in the "1941 Gross Farm Income Report," Bureau of Agricultural Economics.

Note: In the interest of economy, and the reduction of work necessitated by the present emergency, the statement of Government payments to farmers will hereafter be prepared.on a semi-annual basis instead of a monthly basis. As a result, table 5 will be shown only in the August and February Income Situation.

Table 4.- Cash income from farm marketings, by States, April and January-April 1940-42
